1996 ~	Aliseo Japan (Japan) Italian-Japanese Translation and Interpretation

Additional Notes on our combined translation ability

Mario Cerutti

My translation experience in the English-Italian language pair dates back to the 80s when first dealing with numerous missile system manuals. During my service in the Italian Navy (approximately eleven years) I had many contacts with exponents of the US Navy and other European Navies. After switching to the private industry I had growing responsibility in High-tech companies as international marketing a sales manager besides international conferences, thus enjoying numerous contacts with colleagues and clients of various countries of the world. My knowledge of the English language has further broadened after becoming General

Manager of Krautkrämer Italiana from 1990 to 1997, Italian branch of the US Emerson Group. This allowed me to better understand the variegated world of civil high technology, besides discussing, seeing the construction and then the operations of a large number of machines and plants. At the same time I found myself actively involved in the operative and administrative management of a company worldwide leader in its field, then building over the years a solid competence in the Anglo-Saxon accounting systems, international contracts, quality control, legal documents, stock management and personnel management.

Taeko Kani

In the **Italian-Japanese-Italian language pair** Aliseo Japan's translation competence is the direct result of Taeko Kani (Japanese) and Mario Cerutti's (Italian) combined knowledge. After a basic course of Italian Language in Tokyo before moving to Italy, my knowledge developed further while attending classes at a renowned language school in Milano and then by simply living and working here. In Italy I worked for two private companies, one of which is a Japanese worldwide cosmetics company. Here I spent almost six years as secretary of the two residential Japanese Vice-Presidents. My task included translating marketing documents, financial statements and specialized articles, but also interpreting for the Head Office visiting Directors. Since we are native speakers of Italian and Japanese respectively and work as a team, we perfectly understand the source language (Italian or Japanese) and translate faithfully in the target language (Japanese or Italian).

Since arriving in Japan in 1997, we have been working for many Translation Agencies and direct Clients, either in Japan and abroad including Italy. Considering the combined general/technical education acquired in the previous years, we consider ourselves able to provide high-quality translations either in the technical and non-technical fields including general electronics, office automation equipment, AV equipment, electric and electronic appliances, industrial machinery, shipbuilding, automotive, contracts, legal documents, by-laws, marketing, magazines and the like.
